Document 1: JP 8-130187 A (Toshiba Corporation), 21 May 1996, entire text; fig. 1

Document 2: JP 2001-189275 A (Sony Corporation), 10 July 2001, paragraph [0251]

Document 3: JP 6-244110 A (NEC Corporation), 2 September 1994, entire text; fig. 1 to 5

The invention set forth in claims 1 to 5 is disclosed in document 1 (fig. 1) cited in the international search report as a treating apparatus which controls the flow rates of a plurality of raw material gases and inert gases using pressure detection signals, and therefore lacks novelty and does not involve an inventive step.

The invention set forth in claims 6 to 9 does not involve an inventive step in the light of document 1 cited in the international search report and document 2 (paragraph [0251]) cited in the international search report. It would be easy for a person skilled in the art to employ the invention disclosed in document 1 when forming the TiN membrane set forth in document 2, and to optimize the flow rate of the raw material gases.
